Technical skills

Standards: BCH ES 41, 43, 44, 53 | CSA 22.1, 22.3
softwares: SPIDAcalc | AutoCAD | DAD | PowerGrid | RTAC SEL-5033 | SAP |
Programming Languages: VBA | Python | C | C++ | MATLAB | System Verilog | RTL

Education

January 2022-2026

Electrical Engineering, Bachelor of Engineering (The British Columbia Institute of Technology)

- **Overall GPA:** 93%
- **Relevant Courseworks:** Power System Components | Advanced Circuit Analysis | Electromagnetic Fundamentals | Signal Processing and Filters | Digital System Design | Microcontroller Systems | Analog & Digital Communication
- **Capstone Project:** Designed and developed a utility pole health monitoring system integrating capacitive, tilt, and temperature sensors with ESP32 mesh networking to enable preliminary pole condition assessment and reduce unnecessary field inspections.

Work Experience

September 2025 – Present

Xentric Engineering (Langley, B.C) – Substation Intern, Part-time

- Supported the design and review of substation physical layouts and elevation drawings for utility projects.
- Reviewed vendor drawings, datasheets, and technical specifications to extract equipment information for engineering design and procurement support.
- Created a clearance drawing for substation equipment and live parts, including phase-to-phase, phase-to-ground, and live-part-to-structure clearances using ES44 standards
- Drafted single-line diagram for Innergex wind farm feeder drawings as part of substation design deliverables.
- Drafted substation single-line & three-line diagrams in AutoCAD for electrical design deliverables.
- Configured RTAC using SEL-5033, including IED communication setup, RTAC tag mapping, SCADA point integration, and IEC 61131-3-based automation logic exposure.

February 2025 – September 2025

Actalent (New Westminster, B.C) – OH Distribution Designer, Full-time & Part-time

- Worked on BCH overhead distribution pole maintenance designs using ES43 standards
- Worked on a telecom preliminary project involving pole modeling using SPIDAcalc, verifying structural strength and clearances in accordance with ES43 standards
- Engaged in collaborative with cross-functional teams, such as engineers, technologists, city and municipalities, and customers effectively improved my communication skills

May 2024 – August 2024

BCHydro (Edmonds, B.C) – Electrical Engineering Student, Co-op (Transmission Sustainability Planning team)

- Familiar with transmission components and structures, contributing to inspection and design processes
- Prepared a proposal document for the replacement of a transmission circuit line due to defects
- Assisted engineers with substation system map design mark-up, contributing to precise and effective designs
- Conducted inspections in PG RAU, ensuring high-quality inventory information by cross-referencing TLDS data
- Developed a VBA tool for TAR forms, streamlining communication between field operators and the team

January 2023 – May 2024 & August 2024 – February 2025

ZE Power Engineering (Richmond, B.C) – OH/UG Distribution Design Assistant

- Worked on BCH underground feeder cable replacement designs using ES53 standards
- Worked on BCH overhead distribution pole maintenance designs using ES43 standards
- Designed smart meter installation designs in accordance with ES43 standards
- Pull Planner Automation Project: Developed an automated solution to extract data, process it, and generate comprehensive reports for pull planning using python
- BC1C Automation Project: Automated the ticket submitting process to significantly improve efficiency by streamlining data processing and implementing dynamic handling of different input scenarios using python

Scholarship | Award

BCIT The Robert B. Wells and Family Award – Oct, 2024

BCIT International Student Award – Oct, 2023

- Achieved highest GPA among international in BCIT

BCIT Faculty and Staff Association Scholarship – Oct, 2023
